## Section 1: Introduction

This report presents the results of a usability test conducted to evaluate the user interface and workflow associated with Amazon Kindle Fire in-app purchases. Many applications (“apps”) available from the Amazon Appstore that run on the Kindle Fire offer the ability for in-app purchasing. In-app purchasing allows Amazon customers to buy add-on products within games and other apps. I understand that the Federal Trade Commission (FTC) has alleged that Amazon’s in-app billing practices constituted an unfair business practice under the FTC Act, contending that Amazon customers have incurred unauthorized in-app charges when a child is playing an app on a Kindle Fire tablet linked to the account holder’s Amazon account.

Specifically, I was asked to review the expert report of Jennifer King (October 16, 2015) and determine the validity of the conclusions reached in that report and, if appropriate, to prepare a rebuttal report. I was first contacted by counsel for Amazon after Ms. King published her expert report. Ms. King conducted a subjective, heuristic usability inspection of Amazon’s in-app purchase disclosures, purchase flow, and the process for customers to seek a refund. Ms. King’s opinions included her view that Amazon did not “effectively” convey to consumers “that children can incur in-app charges, that they can incur in-app charges without parental involvement, or that they would have to change their device settings in order to prevent children from incurring in-app charges without parental involvement.”<sup>1</sup>

---

<sup>1</sup> Expert Report of Jennifer King (October 16, 2015) at 68.

1 In particular, Ms. King asserts that (1) “there is a lack of education material on the  
2 tablet that defines what [in-app purchases] are”; (2) the “Key Details badge” contained on  
3 the app-description page did not “effectively” convey to consumers “that children can  
4 incur in-app charges, that they can incur in-app charges without parental involvement, or  
5 that they would have to change their device settings to prevent children from incurring in-  
6 app charges without parental involvement”; (3) the “Key Details badge” does not “work  
7 together” with the in-app purchase notice and description contained on the app-  
8 description page and “alone must effectively convey the presence of [in-app  
9 purchasing]”; (4) the text of the Key Details overlay “contains no direct discussion” of  
10 the “fact that [in-app purchases] have real costs associated with them that will result in  
11 charges to the customer’s Amazon account”; (5) customers must already be familiar with  
12 the term “in-app purchases” for the Key Details badge to have “any” impact; (6) the  
13 language of the Key Details badge, the Key Details overlay, and the in-app purchase  
14 notice are “unnecessarily vague”; (7) account holders would not understand that they can  
15 activate Parental Controls to limit or prevent unauthorized in-app purchases made by  
16 others who are using a tablet linked to owner’s Amazon account; (8) the term “Parental  
17 Controls” ineffectively conveyed that account holders could restrict unauthorized  
18 purchases; (9) the dialog box presented beginning in May 2013 for all first-time in-app  
19 purchasers was ineffective for “many users”; (10) customers who read the May 2013  
20 dialog box “may be confused” about its meaning; (11) the term “real money” was  
21 confusing in the absence of a dollar amount or dollar sign; (12) customers may “assume”  
22 that the May 2013 dialog box “is a routine security check rather than a financial  
23 authorization”; (13) the text of the May 2013 dialog box is “not clear” and the term  
24  
25  
26  
27

1 “future in-app purchases” is vague; and (14) Amazon did not effectively convey to  
2 consumers how to contact Amazon to request a refund for an unauthorized in-app  
3 purchase.  
4

5 I designed a usability test to evaluate many of Ms. King’s subjective opinions and to  
6 assess whether Amazon Kindle Fire tablet interfaces, notifications, and descriptions  
7 associated with in-app purchases were so far below contemporary, accepted business  
8 practices that they would have unfairly confused parents and resulted in significant  
9 numbers of unwanted and non-refunded in-app purchases. In short, my usability test,  
10 designed according to accepted standards, would either corroborate or invalidate Ms.  
11 King’s conclusions. This test was designed and performed to evaluate and assess how  
12 clearly the current (and prior) user interfaces communicate the availability and nature of  
13 in-app purchasing, the availability and purpose of Parental Controls as a means to restrict  
14 in-app purchasing, and the availability of contacting Amazon to request refunds for  
15 allegedly unauthorized purchases. The test also evaluates customers’ ability to contact  
16 Amazon to request a refund in the event of an unwanted purchase.  
17  
18

19 Contrary to Ms. King’s subjective opinions, the results of the usability test indicate  
20 that the availability and nature of in-app purchases was very clearly communicated to and  
21 understood by Kindle Fire users. Subjects reported and demonstrated very little confusion  
22 regarding the information that was provided to them on the Kindle Fire interfaces during  
23 the in-app purchase process. Subjects well understood the description pages of apps that  
24 supported in-app purchases as well as those that did not. Subjects well understood the  
25 difference between incurring a cost to download an application and incurring a cost  
26 associated with an in-app purchase. Subjects well understood confirmation screens that  
27

1 asked users to enter a password to approve an in-app purchase. Subjects well understood  
2 the purpose of Parental Controls as it relates to preventing future in-app purchases.  
3 Lastly, subjects well understood the content of the email receipt that is emailed to every  
4 account holder when an in-app purchase is made and all subjects demonstrated various  
5 successful ways that they could contact Amazon if they desired a refund.

## **1.1 Educational and Professional Background and Qualifications**

I hold a Bachelor in Science in Industrial Engineering, a Masters in Science and a Ph.D. in Human Factors from the University of Washington School of Engineering. For over 25 years I have worked in the areas of human factors, user interface design, software development, software architecture, systems engineering, and modeling and simulation across a wide variety of application areas including aerospace, communications, entertainment, and healthcare.

For the past 18 years, I have served as a consultant for Global Technica, Sunny Day Software, Stanley Associates, Techrizon, CDI Corporation, and the Barr Group. In this capacity I have provided advanced engineering services for many companies.

I consulted for the Boeing Company for over 16 years as a senior human factors engineer, user interface designer, and software architect for a wide range of advanced commercial and military programs. Many of the projects that I have been involved with include advanced software development, user interface design, agent-based software, and modeling and simulations in the areas of missile defense, homeland security, battle command management, networking and communications, air traffic control, location-based services, and Unmanned Aerial Vehicle (“UAV”) command and control. Additionally, I was the lead system architect developing advanced air traffic controller workstations and air traffic control analysis applications, toolsets, and trade study simulations for Boeing Air Traffic Management.

1 I was also the architect of the Boeing Human Agent Model, which is an advanced  
2 model for the simulation of human sensory, cognitive, and motor performance as applied  
3 to the roles of air traffic controllers, pilots, and UAV operators. In another project, I was  
4 the lead human factors engineer and user interface designer for Boeing's main vector and  
5 raster computer aided drafting and editing system that produces the maintenance  
6 manuals, shop floor illustrations, and service bulletins for Boeing Commercial Aircraft  
7 Company. Additional responsibilities in my time as a consultant include system  
8 engineering, requirements analysis, functional specification, use case development, user  
9 stories, application prototyping, modeling and simulation, object oriented software  
10 architecture, graphical user interface analysis and design, as well as UML, C++, C#, and  
11 Java software development.  
12

13  
14 In 1995 and 1996, I was hired as the lead human factors engineer and user interface  
15 designer for the first two-way pager produced by AT&T. Prior to this technology, people  
16 could receive pages but had no way to respond utilizing their pager. This new technology  
17 allowed users to use a small handheld device to receive and send canned or custom pages,  
18 access and update an address book, and access and update a personal calendar. This high  
19 profile project involved designing the entire feature set, user interface/user interaction  
20 design and specification, as well as all graphical design and graphical design standards.  
21

22  
23 From 1999 to 2001, I was the lead human factors engineer and user interface designer  
24 for Eyematic Interfaces, which was responsible for all user interface design and  
25 development activities associated with real-time mobile hand held 3D facial tracking,  
26 animation, avatar creation and editing software for a product for Mattel. My work  
27

1 involved user interface design, human factors analysis, requirements gathering and  
2 analysis, and functional specifications.

3  
4 I was the lead user interface designer for a company called ObjectSpeed that  
5 developed a portable handheld device for use in homes and businesses that had the many  
6 of the same capabilities that we take for granted in mobile cellular phones. This portable  
7 multifunction device supported email, chat, video conferencing, internet radio, streaming  
8 media, Microsoft Outlook integration, photo taking and sharing, etc. The ObjectSpeed  
9 device was specifically designed and developed as a portable handheld device.  
10

11 I am the founder, inventor, user interface designer, and software architect of  
12 WhereWuz. WhereWuz is a company that produces advanced mobile software running  
13 on GPS-enabled smartphones and handheld devices. WhereWuz allows users to record  
14 exactly where they have been and query this data in unique ways for subsequent retrieval  
15 based on time or location. WhereWuz was specifically designed and developed to run on  
16 small handheld devices.  
17

18 I am the co-founder of a medical technology company called Healium. Healium is  
19 developing advanced wearable and handheld user interface technology to allow  
20 physicians to more effectively interact with electronic medical records. I am also the co-  
21 founder of a medical technology company called StratoScientific. StratoScientific is  
22 developing a handheld smartphone stethoscope that turns a handheld computer such as a  
23 smartphone, PDA, laptop, or tablet into a full featured digital stethoscope.  
24  
25

26 I designed and developed a large software project for Disney World called xGS that  
27 allowed the operational employees of Disney World to utilize a handheld device to view

1 the status of all of the guests within multiple attractions as well as within one of their  
2 restaurants. The application could run in a real-time/live mode where it would display  
3 data collected from sensors that showed the location and status of all guests within the  
4 attraction; the application could also be run in a fast-time/simulated mode. The  
5 application was developed on a laptop computer and was specifically designed to run on  
6 a variety of handheld devices including laptops, PCs, smartphones, and tablets.  
7

8 I have received numerous awards for my engineering work relating to interface  
9 design, computer graphics, and the design of spatial, stereographic, and auditory displays,  
10 including a \$10,000 scholarship from the I/SEC for advancing the field of interactive  
11 computer graphics for flight simulation, a Link Foundation award for furthering the field  
12 of flight simulation and virtual interface design. I have created graphics for several  
13 popular book covers as well as animations for a movie produced by MIRAMAR. I have  
14 published twenty-two research papers in professional journals and proceedings relating to  
15 user interface design, computer graphics, and the design of spatial, stereographic, and  
16 auditory displays.  
17  
18

19 I graduated from the University of Washington in 1988 with a B.S. in Industrial  
20 Engineering. After graduation, I continued my studies at the University of Washington.  
21 In 1990, I obtained an M.S. in Human Factors. In 1994, I graduated with a Ph.D. in  
22 Human Factors. In the course of my doctoral studies, I worked as an Associate Assistant  
23 Human Factors Professor at the University of Washington Industrial Engineering  
24 Department. My duties included teaching, writing research proposals, designing and  
25 conducting funded human factors experiments for the National Science Foundation, as  
26 well as hiring and supervising graduate students.  
27

1 While studying at the University of Washington, I also worked as a human factors  
2 researcher and designed and performed advanced human factors experiments relating to  
3 interface design, stereoscopic displays, and advanced visualization research, which was  
4 funded by the National Science Foundation. My duties included user interface design,  
5 systems design, software development, graphics programming, experimental design, as  
6 well as hardware and software interfacing.  
7

8 Attorneys for Amazon.com first contacted and retained me for purposes of this report  
9 on October 20, 2015.  
10

11 I am being compensated for my work on this matter and my fee is not contingent on  
12 the outcome of this case or on any of my opinions or the technical positions I explain in  
13 this report. My rate of compensation is \$500 per hour, and the rate for the two individuals  
14 assisting me is \$250 per hour.  
15

16 In the last four years, I have testified as an expert at trial or by deposition in the  
17 following cases:  
18

- 19 • *Silver State Intellectual Technologies v. Foursquare*, IPR2014-00159 (deposition)
- 20 • *Silver State Intellectual Technologies v. Garmin*, District of Nevada, 2:11-cv-  
21 01578-PMP-PAL (deposition and trial testimony)
- 22 • *Select Retrieval v. Overstock*, District of Delaware No. 1:11-cv-00812-RGA  
23 (deposition)
- 24 • *Location Labs v. Locatio.net*, IPR2014-00199 (deposition)
- 25 • *Intellectual Ventures v. Google*, IPR2014-00787 (deposition)
- 26
- 27

1 A detailed record of my professional qualifications, including a list of publications,  
2 awards, research grants, and professional activities, is set forth in my curriculum vitae  
3 that is attached to this report as Appendix H.

## Section 2: Experiment Methodology

A usability test was performed to evaluate what is understood by people using Amazon Kindle Fire tablet interfaces, notifications, and descriptions that are associated with in-app purchasing. This test was carefully designed for neutrality to accurately determine what subjects noticed and understood regarding the various interfaces related to in-app purchases. Furthermore, the test was designed so that it would identify whether any of the tested interfaces, notifications, descriptions, and refund protocols associated with in-app purchasing were so far below contemporary, accepted business practices that they would have unfairly confused parents and resulted in significant numbers of unwanted and non-refunded in-app purchases.

### 2.1 Test Subjects

This usability test included 24 subjects (8 experienced Kindle Fire users and 16 inexperienced Kindle Fire users). There were a total of 28 people recruited for the study; however, three did not appear and one untimely canceled. All of the subjects were previously unknown to the researchers and were recruited using a craigslist post that advertised the study as a mobile tablet study for parents or grandparents. The inclusion criteria were that all subjects must be over the age of 20 years, comfortable using a tablet or smartphone, have at least one child or grandchild currently aged 13 or younger, and be fluent in English. The subjects did not know anything about the purpose of the study until the study was complete.

1 A copy of the craigslist post and recruitment screening survey is provided in  
2 Appendices A and B respectively. There were two copies of the craigslist post, one in the  
3 “Community” section November 20-24, 2015, and the second in the “Gigs” section  
4 November 21-24, 2015. Test subjects were each compensated \$150 for their time.  
5

6 Use of 24 subjects is consistent with the practice in the discipline, as is evident when  
7 considering similar studies published in books, peer reviewed journals, and proceedings.  
8 For example, a usability study by Page (2014) to evaluate the adoption of touchscreen  
9 mobile devices by older adults used four subjects. Werner, Werner, and Oberzaucher  
10 (2012) evaluated general usability of iPad tablets in a study with 11 adults over the age of  
11 60 years old. Another study used 12 subjects to analyze user experience between apps  
12 delivered on a mobile smartphone versus a PC desktop (Ryan & Gonsalves, 2005).  
13 Madithil, Koikkara, Gramopadhye, and Greenstein (2011) utilized 15 subjects to study  
14 the usability of consenting systems on touchscreen interfaces, including tablets. Several  
15 studies have tested the general usability and performance of e-book readers and used 10  
16 subjects (Siegenthaler, Wurtz, & Groner, 2010), 20 subjects (Pattueli & Rabina, 2010),  
17 and 33 subjects (Bigson & Gibb, 2011). Similarly, (Siegenthaler, Schmid, Wyss, & Wurt,  
18 2012) used 12 subjects to analyze reading behavior between LCD and e-ink tablets.  
19  
20  
21  
22  
23

## 24 **2.2 Location and Equipment**

25 The experiment was performed at the Human Factors and Statistical Modeling Lab at  
26 the Seattle Campus of the University of Washington.  
27

1 Each subject was provided a Kindle Fire HD 6 tablet, a Windows laptop computer,  
2 and standard telephone for use during the test. The Kindle Fire and laptop computer were  
3 both connected to the Internet and the telephone was fully operational. They were also  
4 provided the username and password for an active Amazon account.  
5

6 Subjects completed an online survey using the laptop as they performed each task.  
7 The survey was created using Adobe Captivate 9 and the results were tracked using a  
8 learning management system provided by Knowledge Anywhere. The survey displayed  
9 one question at a time to each subject. In this way subsequent questions would not be  
10 able to influence the answers to previous questions. For the questions that required  
11 interpreting information presented on the Kindle Fire HD tablet, the survey provided a  
12 small thumbnail image to the user so that the user could be sure they were viewing the  
13 correct stimulus on the Kindle Fire display. Figure 1 shows a typical survey screen and  
14 screenshots for all screens are shown in Appendix G of this report.

## 2.3 Procedure

Prior to running the test with live subjects, the experimental team performed three dry runs with test subjects. In addition, the study facilitator performed numerous dry runs with no subjects in order to perfect the delivery of the experiment.

All study sessions were led by the same facilitator, Erika Miller, who has experience running hundreds of subjects through studies in a similar capacity. For some sessions a second facilitator participated as well.

The facilitator(s) led the subjects through the study, using a PowerPoint presentation (see Appendix E) containing screenshots guiding the subjects through all of the tasks. When content was presented on the Kindle Fire tablets, the facilitator(s) also observed each subject to ensure they were viewing the correct content associated with the relevant

1 question. The study included numerous stop points where activity ceased until all  
2 subjects had reached the same point.

3  
4 To ensure consistency for all subjects, the instructions provided to the subjects were  
5 read by the facilitator(s) from a script, included in Appendix D of this report.

## 6 7 **2.4 Tasks**

8 The study design included four different tasks:

- 9
- 10 • Task 0 was a simple demographic survey that collected information about the  
11 subjects, such as their gender, age, education, occupation, experience with Kindle  
12 Fires, smartphones, and age of children or grandchildren.
  - 13 • Task 1 related to the description of an app that is provided to a user before the  
14 user purchases that app. If the app offers in-app purchasing, information relating  
15 to in-app purchasing is also provided as part of this description.
  - 16 • Task 2 related to the confirmation dialog box presented to users when they try to  
17 make their first an in-app purchase (testing both a version first implemented by  
18 Amazon in May 2013 and a revised version implemented in June 2014). This  
19 confirmation dialog box includes a request for an account password and provides  
20 information about and the option to set Parental Controls to require a password  
21 for future in-app purchases.
  - 22 • Task 3 related to the emailed order confirmation that is sent to Amazon account  
23 holders immediately after completion of an in-app purchase, as well as the various  
24 methods account holders use to contact Amazon to request a refund, if desired.
- 25  
26  
27

1 The stimuli for Task 1 and Task 2 were presented on the Kindle Fire. Task 3 was  
2 presented on a computer, as that would be a typical way to view and react to an email,  
3 particularly if the email arrived while a child or grandchild was using the Kindle Fire.  
4

5 Some Task 2 activities were based on an older version of the user interface. Since  
6 these screens are no longer available live on a Kindle Fire, subjects were shown  
7 screenshots. The Kindle Fire was used to display all screenshots that relate to interfaces  
8 that would be viewed on a Kindle Fire to ensure that the display was properly replicating  
9 the interface (e.g., size, location, resolution, brightness) that a Kindle Fire user would  
10 experience. A series of full-size screenshots were saved in the photo viewer on each  
11 Kindle Fire, and the test facilitator loaded the appropriate image onto the tablet as needed  
12 to accomplish each task.  
13

14 Appendix F shows the task flow for each of the four tasks that were used in the study.  
15  
16

#### 17 **2.4.1 Task 0: Demographic Survey**

18 A demographic survey was given at the outset to gather general information about  
19 each user (for example, gender, age, education, occupation, and age of children or  
20 grandchildren) and the users' experience with smart devices such as smartphones and  
21 tablets.  
22

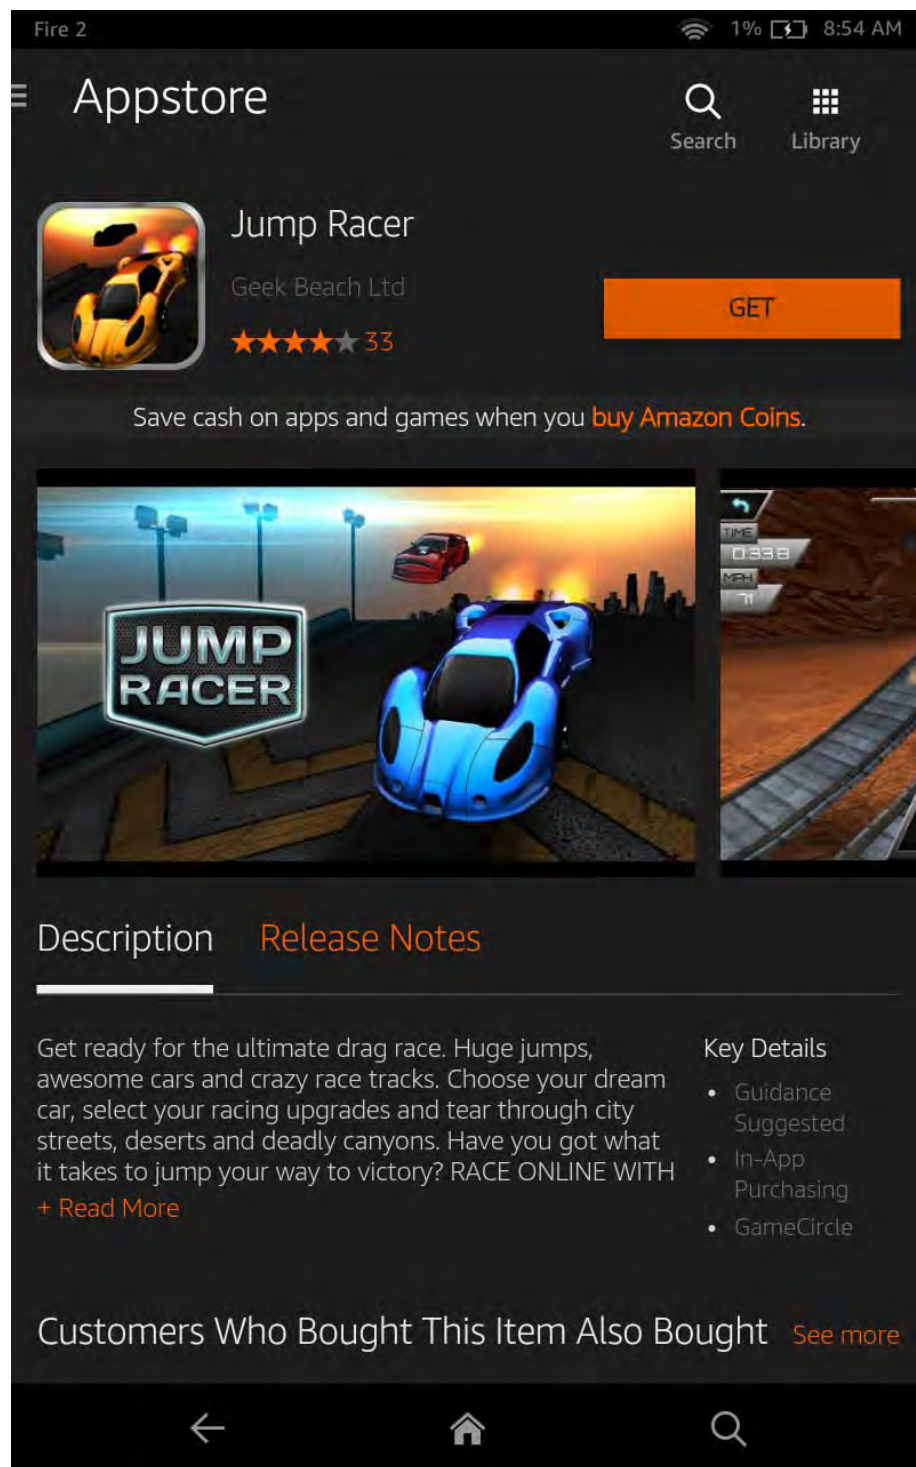

#### 23 **2.4.2 Task 1: App Description Page**

24 Task 1 evaluated subjects' understanding of the information provided on the app-  
25 description page that Amazon customers see when selecting apps from the Amazon  
26  
27

1 Appstore. This task evaluated two types of apps: apps that are free to download and  
2 (1) provide opportunities for in-app purchases and (2) do not provide opportunities for in-  
3 app purchases. The app “Jump Racer” was used to represent apps with opportunities for  
4 in-app purchases (see Figure 2). The app “Jeweled Bricks” was used to represent apps  
5 without opportunities for in-app purchases (see Figure 3).  
6

7 Amazon Underground launched after the relevant time period and began labeling  
8 apps as “Actually Free” in the description page. Therefore, only apps that did not include  
9 this “Actually Free” reference were used in the study. Furthermore, for both types of apps  
10 (with and without opportunities for in-app purchases), only apps with app-description  
11 pages that included “Key Details” badging were presented to the subjects. Also, the  
12 application that had the opportunity for in-app purchases (“Jump Racer”) included the “+  
13 Read More” feature, which when clicked would show the balance of the app-description,  
14 including the text description for in-app purchases and Parental Controls.  
15  
16  
17

19  
20  
21  
22  
23  
24  
25  
26  
27

**Figure 2. “Jump Racer” app-description page (in-app purchasing)**

Figure 3. “Jeweled Bricks” app-description page (no in-app purchasing)

1 The subjects were asked seven questions (see Task 1 in Appendix G) regarding each  
2 subject's interpretations for each app-description page. As discussed in Section 2.4.5 , the  
3 order of the apps presented was counterbalanced so that previous experimental conditions  
4 would not affect the subject's answers. As part of Task 1, subjects were asked to interpret  
5 the "PLEASE NOTE" in-app purchase notice, and, as a separate subtask, subjects were  
6 asked to interpret the "Key Details" badging and in-app purchasing popup definition. The  
7 "PLEASE NOTE" and "Key Details" badging topics were also counterbalanced between  
8 subjects.  
9

### 11 **2.4.3 Task 2: In-App Purchase Workflow**

12 Task 2 evaluated the purchase workflow for the first-time in-app purchases as  
13 experienced by Amazon customers in May 2013 ("May 2013 First-Time User  
14 Experience" or May 2013 FTUX") and June 2014 ("June 2014 First-Time User  
15 Experience" or "June 2014 FTUX"). For this task, the subjects were shown the May 2013  
16 FTUX popup and June 2014 FTUX popup displayed to confirm an attempted first-time  
17 in-app purchase. In this scenario, the subjects were told that they had given their Fire  
18 tablet to their child/grandchild, who is playing a game. The child then gives the Fire  
19 tablet back to the subject with the popup showing. This task was randomized between  
20 subjects as to which popup (May 2013 versus June 2014) was shown first to the subject.  
21  
22  
23  
24  
25  
26  
27

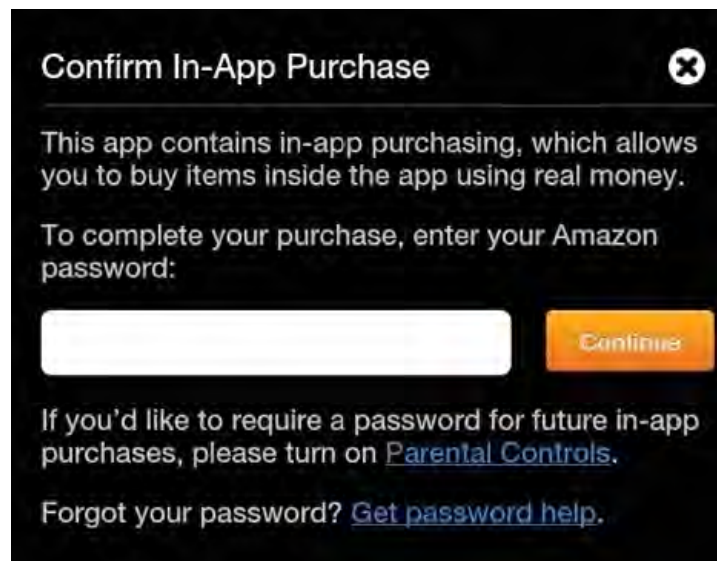

Figure 4. May 2013 FTUX

Figure 5. June 2014 FTUX

1        There were two components to this task. The first was a timing task, where the  
2 subjects were instructed to flip over the Kindle Fire tablet and read the contents of the  
3 screen at the same pace they would if their child or grandchild had just handed them the  
4 tablet. Prior to flipping over the Fire tablet to begin, the subjects clicked “Next” on the  
5 computer survey, which started a timer unknown to the subjects. The subjects were told  
6 to enter the word “password” and click the “Submit” button after they finished reading  
7 the popup. Entering any text in the password box and clicking the submit button on the  
8 computer stopped each timer (i.e., it was not necessary to enter the correct password as  
9 reading time was being measured and not accuracy of password typing).  
10

11  
12        The second component to this task asked the subjects a series of questions about their  
13 understanding and interpretation of the information and options provided on the popup  
14 screens.  
15

#### 16        **2.4.4 Task 3: In-App Purchase Notification and** 17        **Refund Process**

18        Task 3 evaluated the in-app purchase email notification and refund process. For this  
19 task, the subjects viewed an in-app purchase email receipt on the laptop and were told  
20 that they had received the email from Amazon. The subjects were then told that the  
21 product identified in the email was either never purchased or was accidentally purchased  
22 by their child or grandchild while using an app and the participants were instructed to go  
23 about seeking a refund from Amazon for the unintended charge. The various survey  
24 questions in Task 3 asked the subjects to interpret the email.  
25  
26  
27

1 This task was performed on the computer because it is more typical to receive email  
2 on a computer than to receive email on a Kindle Fire. This HTML-formatted email  
3 message included links that the subject could select as though the email had been  
4 received via the subject's inbox. The subjects also had access to an Internet browser (both  
5 Microsoft Internet Explorer and Google Chrome) that they could use to find contact  
6 information for Amazon customer support, if desired. Both Internet browsers were set to  
7 a default home screen of [www.washington.edu](http://www.washington.edu), which was selected as an unbiased page  
8 and not suggestive of using [www.amazon.com](http://www.amazon.com) or a search engine such as  
9 [www.google.com](http://www.google.com). The subjects were also provided an active Amazon username and  
10 password, which was paired to the email links.  
11

12  
13 In the survey questions, the subjects were first asked how they planned to contact  
14 Amazon to request the refund. The subjects were then instructed to contact Amazon to  
15 request the refund for the charge identified in the email in any manner they desired.  
16 Facilitators stopped the subjects just before they would reach Amazon (e.g., before  
17 dialing the phone or when they found the appropriate web form to contact customer  
18 support). During this last task where the user needed to determine how they would  
19 contact Amazon regarding the in-app purchase, each participant was timed without their  
20 knowledge. Lastly, the subjects were asked their subjective perception of how easy or  
21 difficult it was to contact Amazon.  
22

## 23 24 **2.4.5 Task Sequence**

25  
26 Task 0 was a demographic survey and was always presented first. Task 3 was an  
27 evaluation of the Amazon in-app purchase confirmation email and contacting Amazon

1 customer support and this task was always presented last. The order of Task 1 and Task 2  
 2 as well as the subtasks within Task 1 and Task 2 were counterbalanced, with different  
 3 subjects performing the tasks in different orders so as not to influence the results due to  
 4 previous exposure to the various experimental conditions. This counterbalancing was  
 5 accomplished by the facilitator instructing the subjects which subtask to perform at the  
 6 various branch points and by whether Tasks 1 or Task 2 was performed first.  
 7

8 This resulted in four different variations. Of the six experiment sessions conducted,  
 9 two performed Order A, one performed Order B, two performed Order C, and one  
 10 performed Order D. Due to scheduling and the failure of four subjects to appear, the  
 11 groups were not evenly balanced across all four orders, but the analysis verified that the  
 12 order of the tasks and subtasks did not affect subjects' responses (see Section 4.3).  
 13

- 14 • Order A: (n = 9)
- 15     ○ Task 1 > Task 1.1 > Task 1.2 > Task 2 > Task 2.1 > Task 2.2
- 16
- 17 • Order B: (n = 2)
- 18     ○ Task 1 > Task 1.2 > Task 1.1 > Task 2 > Task 2.2 > Task 2.1
- 19
- 20 • Order C: (n = 10)
- 21     ○ Task 2 > Task 2.1 > Task 2.2 > Task 1 > Task 1.1 > Task 1.2
- 22
- 23 • Order D: (n = 3)
- 24     ○ Task 2 > Task 2.2 > Task 2.1 > Task 1 > Task 1.2 > Task 1.1
- 25
- 26
- 27

## Section 3: Data Analysis

The raw data was retrieved from the Knowledge Anywhere database using a SQL query. This output contained the applicable information for each question, including the question number, question text, answer type (e.g. fill-in versus choice), subject response, and time to respond. Approximately 10,900 rows of data were generated and analyzed for the subjects that participated in the test. The experimental data is available at Appendix J

The raw data was then exported using R data analysis software (version 3.2.2) to create a spreadsheet with one row per subject and two columns for each question (subject response and timing). Because the experiment was counterbalanced with subjects receiving questions in different order, the questions across subjects were matched based on the unique identifier for each question. Responses within topics were collapsed based on the subject identifier number.

Most of the questions called for open-ended responses. Prior to reviewing the data, the research team defined the various elements required in the response to each question such that the response be deemed correct (rather than incorrect). Each response was thereafter individually assessed and coded as either correct or incorrect. The researchers conservatively coded responses; ambiguous responses were coded as incorrect to ensure that the coding did not favor Amazon. In fact, often responses that were coded as incorrect could have been coded as correct because the words used indicate that the subject understood additional costs were involved and Parental Controls were available to

1 prevent those costs. Nonetheless, out of an abundance of caution, where a response was  
2 ambiguous, not necessarily erroneous, it was coded incorrect.

3  
4 Once each response was coded, all data was tabulated and analyzed using the R  
5 statistical software program to identify trends and extrapolate to the general public.

## Section 4: Results

### 4.1 Descriptive Statistics

General demographic information was collected on the subjects prior to beginning the usability tasks. As displayed in Table 1, a comprehensive and applicable sample population was used in this experiment.

**Table 1. Demographic information**

<i>Variable</i>	<i>Response</i>	<i>Count</i>
<b>Gender</b>	Male	16
	Female	8
<b>Age (years)</b>	20-29	4
	30-39	9
	40-49	8
	50-59	2
	60-69	1
<b>Highest Level of Education</b>	Some High School	1
	High School Diploma	3
	Some College	11
	Associate Degree	1
	Bachelor Degree	6
	Graduate School	2

In addition, the subjects were asked if they had at least one child or grandchild under the age of 14 years old; all subjects satisfied this criterion. The range of ages for children/grandchildren was 2 years to 13 years old, where many subjects had more than one child/grandchild within this age group. The mean age for children/grandchildren was 7.38 years old, with a standard deviation of 3.39 years.

Descriptive information was also gathered on user experience with smart devices, such as smartphones and tablets. Two subjects had never owned a smartphone and one subject had never downloaded an app onto a smart device. However, when asked during the screening, all subjects stated they were comfortable using a smart device. Table 2 tabulates the responses for users' experience with smart devices.

**Table 2. Experience with Smart Devices**

Question	Response
Have you ever owned a smartphone, such as an iPhone, Android Phone, or Windows Phone?	 <p>Yes 92% No 8%</p>
Do you currently own a smartphone, such as an iPhone, Android Phone, or Windows Phone?	 <p>Yes 88% No 12%</p>
Have you ever owned an Amazon Kindle Fire tablet?	 <p>No 67% Yes 33%</p>
Do you currently own an Amazon Kindle Fire tablet?	 <p>No 71% Yes 29%</p>
Have you ever downloaded an application (also known as an "app") onto your smartphone or tablet?	 <p>Yes 96% No 4%</p>

## 4.2 Results by Task

The results from each of the three tasks are individually presented in this section.

### 4.2.1 Task 1: App Description Page

There were two apps used in this task and all the subjects confirmed that they had never used or downloaded either of the two apps (“Jeweled Bricks” and “Jump Racer”). Therefore, the subjects’ responses are representative of their interpretation of the content controlled within the study, rather than from past experience.

Immediately after first viewing the app-description page for each app, the subjects were asked about what information was provided by the page. For both apps, all 24 subjects were able identify that the page contained content regarding general information about the app, such as game description, reviews, target ages, etc.

Figure 6. What information is provided by this app-description page?

The second question that each subject was asked after navigating to the app-description page for each app was whether they thought it was possible to incur additional costs based on actions taken while using the app. These results are shown in Figure 7. For the app that provided opportunities for in-app purchases, none of the subjects answered incorrectly, meaning all of the subjects (20) correctly understood or were unsure (4) that it was possible to incur additional costs while using the app. Answering unsure is not the same as answering incorrectly because those subjects admit that they do not fully know what is possible within the game play. Although 8 of the subjects were unsure and 3 answered incorrectly about the app with no opportunity for in-app purchasing, their misconception (in the absence of any additional information on the screen) would not result in any accidental purchases made by children because that app does not contain any opportunities for in-app purchases.

**Figure 7. Do you think it is possible to incur additional costs based on actions taken while using the app?**

The subjects were then asked questions relating specifically to the “PLEASE NOTE” in-app purchase description under “+ Read More” and the “Key Details” badging for the app with opportunities for in-app purchasing. The “PLEASE NOTE” and “Key Details”

1 subtasks were tested separately, such that a subject was asked to review and interpret the  
2 “PLEASE NOTE” description, then review and interpret the “Key Details” badging and  
3 in-app purchasing description. The subtask was counterbalanced so that some of the  
4 subjects answered questions about the “PLEASE NOTE” description first and the  
5 remaining subjects answered questions about the “Key Details” badging first. For ease of  
6 presentation and comparative purposes, the discussion and figures below address the  
7 “PLEASE NOTE” and “Key Details” results together.  
8

9       After viewing each of the “PLEASE NOTE” and “Key Details” concepts, subjects  
10 were also asked about how they could limit being charged money for actions taken while  
11 using the app. The responses were coded as correct if they mentioned Parental Controls  
12 setting up a password (see Figure 8). There were 48 total responses for the “PLEASE  
13 NOTE” (24) and “Key Details” (24) questions with 45 correct answers. The sole  
14 incorrect response regarding the “Key Details” content was so coded because the  
15 response was too vague, not because it was erroneous. In fact, the language suggests that  
16 like all other 23 subjects, even this subject understood that account holders could enable  
17 Parental Controls to prevent unauthorized in-app purchasing: *“it is implied that you can*  
18 *down [sic] this with parental controls. But, noyt [sic] specifically stated. I am not*  
19 *certain.”*  
20  
21  
22  
23  
24  
25  
26  
27

**Figure 8. What, if anything, do you think you can do if you want to prevent being charged money for actions taken while using the app?**

For both the “PLEASE NOTE” and “Key Details” concepts, the subjects were asked about their understanding of Parental Controls (Figure 9) and the term in-app purchasing (Figure 10). All but one subject correctly understood the purpose of Parental Controls in the context of in-app purchasing as described in the “PLEASE NOTE” description, and all but one subject correctly understood the meaning of Parental Controls in the context of in-app purchasing as identified in the “Key Details” badging. The sole incorrect response about the “PLEASE NOTE” description was so coded because the subject seemed to indicate that Parental Controls have the ability to monitor application usage. That said, the subject had a good understanding that Parental Controls were for parents or legal guardians and was used for applications: “*Settings where parents or legal guardians can monitor other’s current application usage.*” The sole incorrect response within the “Key Details” badging was so coded because the response did not explicitly mention that Parental Controls can prevent unauthorized in-app purchasing: “*‘parental controls’ allows me to monitor the content that my child is getting exposed to. I can set the levels with regards to violence, language etc.*”

**Figure 9. As it is displayed on this page, what is your understanding of 'Parental Controls'?**

With regard to Figure 10, 23 out of 24 subjects correctly understood the meaning of in-app purchasing as the term was used on the “Key Details” badging. The sole incorrect response within the “Key Details” badging was so coded because the subject indicated that the purchase was within the “site” rather than within the application, but the subject clearly demonstrated that they were aware that an in-app purchase results in a purchase: *“making purchase while on this site.”* All but one subject correctly understood the meaning of in-app purchasing as the term was used in the “PLEASE NOTE” description. The sole incorrect response within the “PLEASE NOTE” description was so coded because the response was too vague about purchases within an app, *“buying while on this site.”*

**Figure 10. As it is displayed on this page, what do you understand the phrase 'In-App Purchasing' to mean?**

All 24 subjects properly interpreted the phrase “which allows you to buy items within the app using actual money” to mean they would be charged real currency, withdrawn from their credit card on file with Amazon (see Figure 11).

**Figure 11. As it is displayed on this page, what do you understand the phrase 'which allows you to buy items within the app using actual money' to mean?**

Subjects were asked one additional question about the “PLEASE NOTE” content, which was a general question about what they understood by the information provided in the “PLEASE NOTE” description (see Figure 12). All but three subjects correctly

understood its meaning. Two of the three incorrect responses were so coded because their language implied that the user would have to purchase more content later in the future to continue playing the game. This misconception would not result in any accidental purchases, however, because at this point the user thinks they will need to spend money to progress in the future and still has the opportunity to choose not to download the app. These responses were “*You will be expected to purchase additional tools and features via in-app purchasing*” and “*letting the costomer [sic] know that with buying the particular app you will have to purchase items later.*” The third incorrect response was so coded because it was too vague, though even it suggests that the subject understood that it meant purchases could be made within the app: “*using this too [sic] buy w/ money using in-app site.*”

**Figure 12. As it is displayed on this page, what do you understand this text to mean?**

Similarly, subjects were asked to interpret what they understood the “Key Details” badging to mean. All 24 subjects correctly identified that this content was to point out important information regarding the app; see Figure 13.

**Figure 13. As it is displayed on this page, what do you understand the phrase ‘Key Details’ to mean?**

Before being instructed to tap on the “Key Details” badging to access the popup window with additional information, the subjects were asked what they understood the bullet point “In-App Purchasing” to mean (see Figure 14). All but three answers were correct. Of the three responses coded incorrect, one misunderstood the question and explained what happens when clicking on “Key Details”: *“well when you click on the key details section it brings up a more in depth description of what it means. (enhanced functionality, game content etc).”* Another was coded incorrect because it implied that additional content would need to be purchased in the future to play the game, though even that response suggests that the subject understood that it meant purchases could be made within the app: *“app will need further purchases to operate the app being*

1 *played.*”. The last response was coded incorrect because it was vague and difficult to  
 2 understand: “*purchaseing [sic] this game while on site.*”

13 **Figure 14. As it is displayed on this page under 'Key Details' text, what do you**  
 14 **understand the phrase 'In-App Purchasing' to mean?**

15 The subjects were then instructed to tap on the “Key Details” badge and read the  
 16 content under “In-App Purchasing” in the popup window. After reading this content, they  
 17 were asked their understanding of the displayed text. All 24 subjects were able to  
 18 correctly state that the app would allow opportunities to make purchases within the app  
 19 using actual money (see Figure 15).

#### **4.2.2 Task 2: In-App Purchase Workflow**

Subjects were provided screenshots of the May 2013 FTUX and June 2014 FTUX first-time in-app purchase confirmation popup. The subjects on average spent 10 more seconds reading the June 2014 FTUX than reading the May 2013 FTUX.<sup>2</sup>

**Table 3. Time to read and input password: May 2013 vs. June 2014 FTUX**

<i>FTUX Popup</i>	<i>Time (seconds)</i>			
	<b>Mean</b>	<b>Standard Deviation</b>	<b>Minimum</b>	<b>Maximum</b>
<b>May 2013</b>	25.17	6.82	15	39
<b>June 2014</b>	35.79	12.54	25	83

<sup>2</sup> A paired t-test was used to compare the timings to read each FTUX, on a participant level. The results showed that there was a mean difference of 10.625, for  $p < 0.001$ . This indicates that there was a significant difference between each subject's times to read the two FUX popups. More specifically, the June 2014 FTUX took on average 10.625 seconds longer to read as compared to the May 2013 FTUX. The results of the timings between these two displays are provided in Table 3.

1 After reading each FTUX popup, the subjects were asked questions regarding  
 2 their understanding of each screen. The first question for each task asked subjects, “What  
 3 is the purpose of this page?” All 24 subjects correctly identified the primary purpose of  
 4 the May 2013 FTUX as asking whether they confirm an in-app purchase; 23 subjects  
 5 correctly identified the same for the June 2014 FTUX (Figure 16). The one incorrect  
 6 response for June 2014 failed to identify the purpose of confirming the current in-app  
 7 purchase (noting only that “[i]t is asking to turn on parental controls for future  
 8 *restriction on in app purchases*”).

11 Subjects were then asked, “What are your options as described by this page?”  
 12 This question was designed to test whether the subject identified the option of turning on  
 13 Parental Controls to require a password for future in-app purchases. For the May 2013  
 14 FTUX, 21 subjects correctly identified that option and 22 subjects identified that option  
 15 in response to the June 2014 FTUX (Figure 17). The three incorrect responses for the  
 16 May 2013 FTUX did not identify the option to require a password for future in-app  
 17 purchases: “*Enter your password to complete purchase*” and “*to buy or not to buy*” and  
 18 “*you can allow a purchase by giving password and this password will also be required*  
 19 *for any future purchases.*”

22 The two incorrect responses for the June 2014 FTUX are listed below. In the first  
 23 response, the subject did not know if he or she could cancel the in-app purchase: “*Im*  
 24 *[sic] not sure if you can stop the purchase just made the child or not- it is unclear to*  
 25 *me from the wordikng [sic]. Yo may set a password tocpnfirm [sic] future purchasing*  
 26 *or choose to allow no password confirmation for future purchasikng [sic].*” In the  
 27

second response, the subject failed to address the Parental Controls aspect of the dialog:  
*“to require a password.”.*

**Figure 16. What is the purpose of this page?**

**Figure 17. What are your options as described by this page?**

Figure 18 through Figure 20 provide the results for questions that were asked identically between the two FTUX popups. For the question asking what would happen if the subject closed the screen without entering the password (Figure 20), there were three

incorrect responses. One of the responses was so marked incorrect because it addressed only issues pertaining to Parental Controls, not that it was erroneous with respect to canceling the particular in-app purchase: *“No limits will be set on my account unless I take the step to go to Parental Controls and set limits.”* Another was so marked incorrect because it simply reiterated the question, not that it was erroneous with respect to canceling the particular in-app purchase: *“it will close.”*

For the June 2014 FTUX, the sole response coded incorrect for interpreting the meaning of Parental Controls was so coded because it was too vague as to what the subject meant: *“on adults are too use for their use.”* There were three answers coded incorrect for the question asking about the consequences of closing the window without entering the password. Two of the responses were coded incorrect because they did not address what would happen regarding the in-app purchase, not because they were erroneous: *“it will close”* and *“i think it will go back to the main page of the app, homepage, etc.”*

**Figure 18. As it is displayed on this page, what is your understanding of ‘Parental Controls’?**

**Figure 19. What, if anything, do you think you can do to prevent being charged money for actions taken while your child/grandchild use the app?**

**Figure 20. What do you think will happen if you close the screen without entering your password?**

The subjects were asked additional questions about the May 2013 FTUX and June 2014 FTUX using varying wording depending on the specific text used for the individual dialog box. The results are provided in Table 4.

Table 4. Interpretations of the two FTUX popups

FTUX Popup	Question	Response
May 2013	As it is displayed on this page, what do you understand the phrase “which allows you to buy items inside the app using real money” to mean?	<i>Correct: 24 Incorrect: 0</i>
May 2013	As it is displayed on this page, what do you understand the phrase “This app contains in-app purchasing” to mean?	<i>Correct: 23 Incorrect: 1</i>
June 2014	As it is displayed on this page, what do you understand the phrase “In-App Purchase” to mean?	<i>Correct: 23 Incorrect: 1</i>
May 2013	What do you think will happen if you enter your password and select “Continue”?	<i>Correct: 21 Incorrect: 3</i>
June 2014	What do you think will happen if you select “Do not require a password for future purchases,” enter your password, and select “Continue”?	<i>Correct: 22 Incorrect: 2</i>
June 2014	What do you think will happen if you select, “Require a password for future purchases (turns on Parental Controls),” enter your password, and select “Continue”?	<i>Correct: 23 Incorrect: 1</i>
May 2013	As it is displayed on this page, what do you understand the phrase “If you’d like to require a password for future in-app purchases, please turn on Parental Controls” to mean?	<i>Correct: 22 Incorrect: 2</i>
June 2014	As it is displayed on this page, what do you understand the phrase “Do not require a password for future purchases” to mean?	<i>Correct: 24 Incorrect: 0</i>
June 2014	As it is displayed on this page, what do you understand the phrase “Require a password for future purchases (turns on Parental Controls)” to mean?	<i>Correct: 23 Incorrect: 1</i>

For the May 2013 FTUX, all 24 subjects correctly understood that “buying items inside the app using real money” would cost them actual currency from their credit card on file with Amazon.

In the second row of Table 4, 23 out of 24 subjects correctly answered the question about the meaning of applications that contain in-app purchases. The sole incorrect response was so coded because the subject did not indicate why he or she would be charged, even though the subject seems to well understand that he or she would need to access an electronic form of payment and therefore presumably be charged once that

1 electronic form of payment was accessed: “*You need access to an electronic form of*  
2 *payment.*” The one response coded incorrect for the June 2014 FTUX was so coded  
3 because it was too vague, not because it was erroneous: “*purchasing in-house apps.*”  
4

5 All but three subjects correctly understood what would occur on the May 2013 FTUX  
6 if they entered their password and continued. Two responses were coded incorrect  
7 because they did not mention that the in-app purchase would be completed, though even  
8 those responses suggest that the subjects understood the process would be completed: “*it*  
9 *will go bac [sic] to app*” and “*it will continue too [sic] site.*” All but two subjects  
10 correctly understood what would occur on the June 2014 FTUX when the “Do not require  
11 a password for future purchases” option was selected. One response was coded incorrect  
12 because the subject thought there would be a follow-up popup window that confirmed the  
13 future password requirement decision, though even that response suggests that the  
14 specific purchase would require a password and additional passwords may still be  
15 required: “*it will most likely still make me type in the password for this purchase and*  
16 *perhaps confirm with a question whether or not i want to remove the password*  
17 *requirement for future purchases for sure.*” All but one subject correctly understood  
18 what would occur on the June 2014 FTUX when the “Require a password for future  
19 purchases (turns on Parental Controls)” option was selected. The sole incorrect response  
20 was so coded because the answer was too vague, not because it was erroneous: “*it will*  
21 *continue on*”.  
22  
23  
24

25 For the May 2013 FTUX, the subjects were asked about their understanding of the  
26 phrase “if you’d like to require a password for future in-app purchases, please turn on  
27 Parental Controls.” All but one subject correctly understood the meaning of that phrase.

1 The vast majority of the subjects answered this question correctly. There were two  
2 responses out of 24 that were coded as incorrect. One of the responses was coded  
3 incorrect because the response indicated that the subject was not sure if the current  
4 purchase could be immediately canceled, though even that response indicates that the  
5 subject understood that settings were available to control future purchases: “*meaning*  
6 *that maybe you can not stop the transaction in process but can set your settings to*  
7 *control how purchases are approved in the future*”. The other response that was coded  
8 incorrect was coded as such because the subject did not talk about the need for users to  
9 provide a password when trying to make in-app purchases in the future. That said, the  
10 response revealed that the subject realized that users would need to provide a password:  
11 “*In order to turn on this feature you need to provide a password.*”  
12

13  
14 All 24 subjects correctly understood that the option in the June 2014 FTUX for “do  
15 not require a password for future purchases” meant that future in-app purchases could be  
16 made without entry of a password. All but one subject correctly understood the meaning  
17 of the option “Require a password for future purchase (turns on Parental Controls)” in the  
18 June 2014 FTUX. The sole response coded incorrect was so coded because the subject  
19 did not appear to understand the context of the question: “*Make it so that if you think*  
20 *your password is compromised, you can change on PC and the tablet will double*  
21 *check.*”  
22  
23  
24  
25  
26  
27

### 4.2.3 Task 3: In-App Purchase Notification and Refund Process

The subjects were asked their understanding of the information provided in the in-app purchase order-confirmation email. The summary of their responses is provided in Table 5. Note that for this task, the computer system failed to record one of the subject's responses for some of the questions; therefore, there are only a total of 23 responses for some of the questions related to the last part of this Task 3. Of the 11 total survey questions asked within Task 3, responses to four questions were collected by all 24 subjects.

All of the subjects correctly answered the questions about the information provided by the email order confirmation; everyone identified what information was provided in the email, what product was ordered, when it was ordered, and how much the credit card had been charged.

**Table 5. Interpretations of email notification**

Question	Correct	Incorrect
What information is provided by this email?	24	0
As described in this email, what is the name of the product that has been ordered?	24	0
As described in this email, when was this product ordered?	24	0
If you received this email, do you think your credit card on file with Amazon has been charged for buying this product?	24	0
How much money do you think your credit card on file with Amazon has been charged for this order?	23	0

Before the subjects were told they were going to actually contact Amazon, they were asked what methods they would use to contact Amazon to request a refund. Their responses about which modality they would use are summarized in Table 6. Note that for

this task their computer screen displayed the email notification, which may explain why so many subjects referenced the links within the email.

**Table 6. Possible ways to contact Amazon to request refund**

Question	Modality	Count
What possible way or ways could you try to contact Amazon and request a refund from Amazon?	www.amazon.com	4
	Links in email	10
	Online chat	2
	Phone	6
	Email	6
	Unsure	1
Are there other possible ways to contact Amazon to request a refund? Please identify.	www.amazon.com	3
	Links in email	4
	Online chat	4
	Phone	6
	Email	2
	Amazon Appstore	1
	Unsure	6

All subjects were successfully able to contact Amazon to request a refund (that is, all of the subjects located the pertinent information to call Amazon directly, have Amazon call them, begin an online chat with customer service, or complete the online form, at which point the facilitator told the subject he or she was finished). The methods the subjects tried included visiting www.amazon.com, www.google.com, locating a phone number, online chat, and email. It took the subjects an average of 5.26 minutes to contact Amazon, with a standard deviation of 3.72 minutes. However, outliers substantially skewed this, where the range was 14 seconds to 15.9 minutes. The subjects were also asked their subjective perception of how easy or difficult it was to contact Amazon, which was based on a 5-point Likert scale. The results of this are provided in Table 7.

**Table 7. Likert scale on difficulty to contact Amazon**

<i>Question: How difficult was it to contact Amazon before the facilitator told you to stop?</i>				
<b>Very Easy</b>	<b>Easy</b>	<b>Neutral</b>	<b>Difficult</b>	<b>Very Difficult</b>
1	2	9	8	3

Not surprisingly in light of the subjective nature of the question, responses to the question on how difficult to contact Amazon include some anomalous results. For example, one subject who said the task was “very difficult” completed it in 1:54. Two subjects deemed the task “difficult” despite completing it in 14 seconds and 2:26, respectively. The former of these two subjects considered the task “difficult” because she *“was using someone else[']s name and purchases.”* A subject who completed the task in 41 seconds answered “Neutral.” By comparison, a subject who completed the task in 5:10 responded that it was “easy” to contact Amazon.

### **4.3 Counterbalance Validity**

The order of Tasks 1 and 2, as well as the subtasks within Task 1 and Task 2 were counterbalanced across participants. There were four variations of ordering that were used in the experiment (see Section 2.4.5). By controlling the order of the tasks, the results are robust against variation due to exposure within the study (e.g., knowledge acquired and carried across tasks or adjusting to experiment setting).

There were very few responses that were incorrect; in fact, many of the questions had no incorrect responses and several only had one incorrect response. Therefore, a statistical analysis on differences between the groups would not yield significant power. However, it is apparent from analyzing the data that the distribution of incorrect

1 responses was not correlated with the ordering of the tasks. Therefore, these results are  
2 not subjective based on exposure.

## Section 5: Discussion

The results of the usability study overwhelmingly indicate that subjects understood the various interfaces and workflow associated with Amazon Kindle Fire in-app purchases.

Parents and grandparents with children/grandchildren under the age of 14 years old participated in this study. All of the subjects were comfortable using a smart device given their responses from the initial screening questions. The cohort included people with and without experience using an Amazon Kindle Fire. The sample population used in this study was an accurate representation of the general public: the study included males and females, a comprehensive assortment of age groups, and a wide range of education levels.

The study counterbalanced experiment tasks and subtasks to account for exposure. Furthermore, the study was designed to be as unbiased as possible, in order to accurately evaluate what subjects understood and noticed regarding the various interfaces associated with in-app purchases. The majority of the questions asked for short-answer (fill-in the text box) responses from the subjects. This eliminated the potential for the study to provide suggestive answers (e.g., multiple choice). The open-ended questions were categorized as either incorrect or correct by the research team. Prior to reviewing the responses, a criterion for each question's response was determined. In cases where the subject's response was unclear, the response was marked as incorrect to ensure conservative results that did not improperly favor Amazon.

None of the participants had ever played or downloaded any of the apps used in the analysis. Therefore, their responses were not subject to influence through past experiences with the apps.

## 5.1 App Description Page

Task 1 tested the following opinions offered by Ms. King:

- The in-app purchasing notice and “Key Details badge” contained on app-description pages “does not effectively convey to consumers that children can incur IAPs [in-app purchases], that they can incur in-app charges without parental involvement, or that they would have to change their device settings to prevent children from incurring in-app charges” (p. 32);
- The text of the Key Details overlay “contains no direction discussion” of the “fact that IAPs have real costs associated with them that will result in charges to the customer’s Amazon account” (p. 27);
- Customers must already be familiar with the term “in-app purchases” for the Key Details badge to have “any” impact (p. 30);
- The language of the Key Details badge, the Key Details overlay, and the in-app purchase notice are “unnecessarily vague” (p. 30);
- Account holders would not understand that they can activate Parental Controls to limit or prevent unauthorized in-app purchases made by others who are using a tablet linked to owner’s Amazon account (pp. 30-31); and
- The term “Parental Controls” ineffectively conveyed that account holders could restrict unauthorized purchases (p. 31).

The test results are wholly inconsistent with the above-listed opinions of Ms. King. All of the subjects clearly identified what type of information was presented on the app-description page (Figure 6). After viewing the app-description page and being asked if there was potential to incur additional costs based on actions taken while using the app, there was very little confusion that would have resulted in unwanted charges (Figure 7).

1 The majority of the subjects correctly identified that the app without opportunity for in-  
2 app purchases would not result in additional costs. Although some subjects were unsure  
3 or incorrect in their interpretations, this misconception could not have resulted in  
4 additional costs to the consumer.  
5

6 For the app with in-app purchase opportunity, none of the subjects incorrectly  
7 interpreted the information (Figure 7). In other words, zero subjects said there was no  
8 opportunity to incur additional charges. When asked to identify possible ways to prevent  
9 being charged money for actions taken while using the app, 92% correctly answered after  
10 reading "PLEASE NOTE" content and 96% correctly answered after reading the "Key  
11 Details" content (Figure 8).  
12

13 After reading the "PLEASE NOTE" content, 96% of the subjects correctly  
14 understood Parental Controls (Figure 9) and 96% understood the phrase "in-app  
15 purchasing" (Figure 10). After reading the "Key Details" content, 96% understood  
16 Parental Controls (Figure 9) and 96% understood the phrase "in-app purchasing" (Figure  
17 10). All of the subjects were able to correctly interpret the phrase "which allows you to  
18 buy items within the app using actual money." (Figure 11). Furthermore, after viewing  
19 the popup by selecting "Key Details" and reading the section about in-app purchasing,  
20 100% of the subjects correctly described the meaning of in-app purchasing (Figure 13)..  
21  
22

23 King indicated that it was inadvisable to "wait until the end of the checkout process"  
24 to discuss in-app purchasing (p. 21). These results indicate that there is ample previous  
25 disclosure about in-app purchasing prior to "checking out." This disclosure is provided  
26  
27

by the “Key Details” badging, the “PLEASE NOTE” indication, and the “Key Details” popup, and the study indicated that this information was well understood.

## 5.2 FTUX Popups

Task 2 tested Ms. King’s opinions about the May 2013 FTUX and June 2014 FTUX.

Ms. King opined that:

- The dialog box presented beginning in May 2013 for all first-time in-app purchasers was ineffective for “many users” (pp. 36-39);
- Customers who read the May 2013 dialog box “may be confused” about its meaning (p. 37);
- The term “real money” was confusing in the absence of a dollar amount or dollar sign (p. 37);
- Customers may “assume” that the May 2013 dialog box “is a routine security check rather than a financial authorization” (pp. 37-38);
- The text of the May 2013 dialog box is “not clear” and the term “future in-app purchases” is vague (p. 38).

On the contrary, the results from the May 2013 and June 2014 FTUX in-app purchase workflow show that Amazon clearly communicated the relevant information to parents/grandparents across both time periods. Although King is critical of the wording and design of the FTUX popups, the study results demonstrate that they communicate clearly and effectively.

Despite the shorter text of the May 2013 FTUX, subjects understood that the popup provided the option to require a password for future in-app purchases nearly as well as when shown the revised and expanded content within the June 2014 FTUX. For the May 2013 FTUX, 88% of the subjects understood the options that were available to them as

1 presented in the popup (Figure 17), and 96% understood what Parental Controls were and  
2 how to prevent being charged for actions taken while their child/grandchild use the app  
3 (Figure 18). After reading the May 2013 FTUX, all of the subjects understood the  
4 meaning of the phrase “which allows you to buy items inside the app using real money”  
5 (Table 4).  
6

7 King indicated that there may be some customer confusion over the use of the term  
8 “real money” in the in-app purchasing confirmation prompt to indicate that actual costs  
9 would be incurred (p. 37). All study participants understood “real money” to mean that  
10 their credit card on file with Amazon would be charged.  
11

12 For the June 2014 FTUX, 23 out of 24 subjects (96%) understood the purpose of the  
13 page (Figure 16) and the meaning of Parental Controls (Figure 18). After reading the  
14 June 2014 FTUX, all of the subjects were able to identify how to prevent being charged  
15 money for actions taken while their child/grandchild used the app (Figure 19). Although  
16 3 out of 24 subjects incorrectly interpreted what would happen if they close the screen  
17 without entering their password (Figure 20), this misconception would not have resulted  
18 in additional or unwanted charges.  
19  
20

21 When asked about the term in-app purchasing, 96% correctly defined it after reading  
22 the May 2013 FTUX and 96% also correctly defined it after reading June 2014 FTUX  
23 (Table 4). When asked specifically about their options within the popup, 21 out of 24  
24 correctly stated what would happen if they selected continue (May 2013 FTUX), 22 out  
25 of 24 correctly stated what would happen if they selected “Do not require a password for  
26 future purchases” and “Continue” (June 2014 FTUX), and 23 out of 24 correctly stated  
27

1 what would happen if they selected “Require a password for future purchases” and  
2 “Continue” (June 2014 FTUX) (Table 4). Moreover, 22 out of 24 correctly understood  
3 the phrase “If you’d like to require a password for future in-app purchases, please turn on  
4 Parental Controls” after reading the May 2013 FTUX (Table 4). All 24 correctly  
5 understood the meaning of the phrase “Do not require a password for future purchases”  
6 on the June 2014 FTUX, and 23 out of 24 correctly understood the meaning of the phrase  
7 “Require a password for future purchases (turns on Parental Controls)” on the June 2014  
8 FTUX (Table 4).  
9

10 King indicated that customers presented with the May 2013 FTUX may not  
11 understand that, by entering a password to authorize an in-app purchase, they were  
12 permitting in-app purchases to occur without password entry (pp. 36-37). I believe that  
13 the dialog box is quite clear in the regard. The May 2013 prompt stated: “*If you’d like to*  
14 *require a password for future purchases, please turn on Parental Controls.*” Study  
15 participants had no trouble correctly understanding this language.  
16  
17

18 With regard to the in-app purchasing verification window, King also indicates that  
19 “the only direct action one can take in this window other than to cancel is to enter one’s  
20 password” (p. 37). It is not clear to me what other action should be available, as for the  
21 vast majority of users this should be a binary decision point: enter a password to make the  
22 purchase or click Cancel to decline the purchase. Introducing other options would clutter  
23 the dialog box, potentially require scrolling, and generally make the dialog box more  
24 difficult to understand or use.  
25  
26  
27

## 5.3 Purchase Notifications and Refunds

The results from the study also indicate that Amazon clearly communicated information regarding the notification that an in-app purchase was made. After viewing the in-app purchase notification email, all of the subjects were able to correctly interpret the information provided. All of the subjects were able to clearly state what information was provided in the email, the name of the product that had been ordered, when it had been ordered, and how much the credit card had been charged.

When asked how they would seek a refund from Amazon for the purchase, 22 out of 23 subjects (a computer malfunction caused one subject's data to not be collected) were able to identify pertinent modalities of communication (Table 5). Even though the survey questions relating to contacting Amazon were only collected for 23 of the subjects, all 24 subjects attempted to contact Amazon for a refund. All 24 subjects successfully reached the point where they were about to commence a connection with Amazon customer service (e.g., dial the phone number, open an online chat). The average time it took subjects to reach this point was 5.26 minutes, with a range from 14 seconds to 15.9 minutes. Nearly 40% of the subjects completed the task in under 3 minutes, while nearly 75% completed the task in 6:12 or under.

As noted above, some of the responses describing how difficult it was to contact Amazon reveal inconsistencies across subjects when compared against the time it took to complete the task. For example, it is difficult to reconcile the response that it was "difficult" to contact Amazon for the subject who completed the task in 14 seconds. The responses also demonstrate the importance of an individual's expectations, as some

1 subjects considered the task “difficult” or “very difficult” when completing it in under  
2 3 minutes, while another subject who finished in just over 5 minutes thought it was  
3 “easy” to contact Amazon.  
4

5 With regard to subjects’ expectations, it should be noted that Amazon’s reputation for  
6 excellent customer service is well known. Subjects were not asked to contact the  
7 customer service department for any other company, nor were they asked their perception  
8 of how difficult it was to contact Amazon in comparison to their experience with any  
9 other company. It is my opinion that the responses could have been influenced by  
10 subjects’ high expectations for Amazon and their consideration of the task in isolation,  
11 without comparison to other companies.  
12

13 Regarding the time required to contact Amazon, although the experimenters tried to  
14 create an environment that was as close as possible to the environment that the users  
15 would experience at home, it is important to note that this task may have been more  
16 difficult and more complex than it would have been if experienced in the user’s home  
17 environment. For example, subjects were in a room with up to four other people  
18 completing the same task. It is difficult to determine if this setting accidentally tunneled  
19 subjects towards one modality, when they may have tried something else if they had been  
20 at home. Also, there are many ways to reach Amazon’s Contact Us page, but many  
21 require multiple clicks.<sup>3</sup> Although the facilitator told subjects it was not a race, the  
22 presence of others in the room may also have led some subjects to start down a path to  
23  
24

---

25 <sup>3</sup> Amazon’s Supplemental Responses and Objections to Plaintiff’s Third Set of Interrogatories  
26 (September 28, 2015), at 2-12. For example, the Contact Us page can be reached by clicking on “Your  
27 Apps and Devices” in a confirmatory email, then selecting “Customer Service” on the left of the screen;  
similarly, clicking on “Your Account” or the Order ID in a confirmatory email, then clicking “Help,” will  
provide numerous routes to reach the Contact Us page with one or two additional clicks.

1 contact Amazon and quickly abandon it if not immediately successful. One subject wrote  
2 that it was confusing for them to be using someone else's Amazon account.

3  
4 On December 6, 2015, I was provided a copy of a survey for this case conducted by  
5 Dr. Barry A. Sabol.<sup>4</sup> I reviewed Dr. Sabol's report, which summarized the findings of a  
6 survey of 1,237 Amazon customers (with children under the age of 17 living in their  
7 households) who had purchased a digital product from Amazon, including 301 in-app  
8 purchasers.<sup>5</sup> The 272 respondents who had previously contacted Amazon customer  
9 service about a digital product were asked the following question: "Compared to your  
10 experience with other companies, was it easier, about the same or more difficult to  
11 contact Amazon's customer service?"<sup>6</sup> Dr. Sabol summarized the results as follows:  
12 "Overall, 94% responded that it was easier (73%) or about the same (21%) to contact  
13 Amazon's customer service compared to other companies. Among In-App Purchasers,  
14 97% responded that it was easier (74%) or about the same (23%) relative to other  
15 companies."<sup>7</sup>  
16

17  
18 Given that Dr. Sabol's survey asked respondents about their actual experience  
19 contacting Amazon's customer service and as compared to contacting other companies, it  
20 is my opinion that the results of Dr. Sabol's survey are more reliable than the results in  
21 this test regarding the task of contacting Amazon and the subjects' subjective perception  
22 of that task.  
23

24

<sup>6</sup> Expert Report of Barry A. Sabol, Ph.D. (December 7, 2015) at 16-17.

<sup>7</sup> Expert Report of Barry A. Sabol, Ph.D. (December 7, 2015) at 16.

## Section 6: Conclusion

My opinion is that the Amazon notifications and purchase flows tested informed parents adequately about in-app purchases. The results of this usability test strongly support this opinion. The results are conclusive that the Kindle Fire user interfaces and email notifications should not have resulted in significant percentages of unwanted and non-refunded in-app purchases. The results of the usability test substantially undermine Ms. King's opinions that the Kindle Fire notices, user interfaces, and confirmatory email were "ineffective."<sup>8</sup>

When considering these results, it is important to balance the user protection that Amazon provides regarding in-app purchases with the needs of those who do desire to make in-app purchases. There are many pieces of information that Amazon needs to disclose to consumers at various phases in the purchase flow and the intricacies of how in-app purchasing works are not the most important information to convey. It would be inappropriate for in-app purchasing information to always be front and center on every screen, particularly given that the results of this study show in-app purchasing information to be clearly understood as currently presented.

Further, Amazon's ongoing intention to improve the in-app purchasing experience is evident. For example, the FTUX popup was changed in June 2014. It is important to note that the study results show that the both the May 2013 and June 2014 FTUX popups were

---

<sup>8</sup> In my experience, a valid usability test is typically a superior way to evaluate a user interface than a usability inspection, particularly one performed by a single evaluator, as was done in Ms. King's report.

1 very well understood by the subjects of the experiment. It can be concluded from this  
2 result that subjects well understood both the May 2013 and June 2014 FTUX.

## \$150 for Mobile Tablet Study

Are you interested in participating in a research study involving mobile table devices?

Global Technica invites parents and grandparents to participate in a study evaluating mobile tablet devices and interfaces.

The study will take place at the University of Washington. Your participation will involve interacting with a tablet and answering a questionnaire. It will take approximately 2 hours to complete.

Who can be part of this study?

- Adults over the age of 20 years old
- Must have at least one child or grandchild currently aged 13 or younger
- Fluent English speakers
- Comfortable using a tablet or smartphone

Compensation \$150

If interested, please register online at <http://goo.gl/forms/4oWws95Zzp>

or

Email: [erika@globaltechnica.com](mailto:erika@globaltechnica.com)

## CONSENT FORM

### Mobile Tablet Usability Study

#### *Researchers:*

Craig Rosenberg (PI), Global Technica

Doug Wieringa, Global Technica

Erika Miller, Global Technica

## PURPOSE OF THE STUDY

The purpose of this study is to evaluate mobile tablet interfaces.

## STUDY PROCEDURES

Your involvement will consist of one visit lasting approximately 2 hours, which will take place in a conference room with up to eight other people.

You will be asked to interact with a computer and mobile tablet during the study. On the computer, you will be asked a series of questions about the tablet as well as computer-generated images. Your input will be collected using a survey, but we will not ask for your name on the survey. There are no right or wrong answers in the study.

Before dismissing you, the researcher will compensate you for your time.

## BENEFITS AND RISKS

There are no anticipated physical or emotional risks to participants. No risk greater than those experienced in ordinary conversation is anticipated. You will receive \$150 after you complete all study procedures.

## CONFIDENTIALITY OF RESEARCH INFORMATION

Unless ordered otherwise by a court, your confidentiality will be protected throughout the experiment and evaluation, as well as in any subsequent reports. All findings used in any written reports or publications that result from this study will be reported in aggregate form with no identifying information.

For good and valuable consideration, including monetary payment received in exchange for your participation in this research exercise, you agree not to in any way discuss, disclose, or communicate that you participated in the study, the fact that the research is taking place, the conduct of the research, the content of the materials provided during the study, and the opinions and conclusions reached by the participants involved in the research including your own, whether in discussions with family, friends, or third parties (including any representatives of the media). You further agree that you will not publish your knowledge of the research, including via posting any information learned in the research in books, articles, or online resources such as websites, blogs, emails, any social-media platforms or on social media in any form, including but not limited to Facebook, Twitter, Instagram, Vine, Snapchat, or YouTube.

## OTHER INFORMATION

Your participation in this evaluation is completely voluntary. You may refuse to participate and you are free to withdraw from this study at any time.

If you agree to participate in this study, you will be compensated for your time and effort. You will be given \$150 after you complete all study procedures.

## AUTHORIZATION

By signing this consent form, you are indicating that you fully understand the above information and agree to participate in this focus group.

Printed Name of the Participant \_\_\_\_\_

Signature of the Participant \_\_\_\_\_

Date \_\_\_\_\_

## Appendix D: Facilitator Script

### Introduction

Hi my name is Erika and I am from Global Technica. You are here today because we are doing a usability study on mobile tablet interfaces. Your involvement today should take about 1 to 2 hours.

How many of you are familiar with using a Kindle Fire? All right, well we are going to do a series of tasks on a Kindle Fire. But I will guide you through the steps so it shouldn't be too challenging if you're unfamiliar with the interface.

1 We are going to be going through all the tasks as a group, so please don't jump ahead.  
2 During the study, you are going to answer questions on the computer as you look at  
3 various screens on the Fire tablet. I will tell you what screen you should be looking at,  
4 but if you have any questions during the process please ask.  
5

6 I am now handing out a copy of the consent form. It's fairly short, so I am going to  
7 give you all a few minutes to read through it and answer any questions you may have.  
8

9 Are there are questions I can answer? If you are still interested in being in the study,  
10 then please go ahead and sign the consent form.  
11

12 *(Collect consent form)*  
13

## 14 **Getting Started**

15 Before we get started, here are a few things to keep in mind. During this study you  
16 will be going through a series of questions prompted through the computer. I am going to  
17 use this overhead projector to guide you through many of the steps. When you finish a  
18 task, the computer will prompt you to stop. Anytime you see a stop sign or a navigation  
19 screen; do not continue past these breaks in the tasks. Again, please do not continue  
20 forward until I tell you to.  
21

22 Also remember that this is not a race. Please read through the questions carefully and  
23 consider your responses. Please do not look at the computer screen for the person sitting  
24 next to you. Others may or may not have the same number or order of questions as you,  
25 so please do not base your progress off others. Lastly, there are no right or wrong answers  
26 to these questions, just answer as you see appropriate.  
27

4

## 5        **Task 0**

6

7

     All right, we are ready to get going. First off we are going to take a preliminary  
survey. I am going to log into the computer for each of you.

8

9

*(set up computer, survey screen)*

10

11

     Please launch “Kindle Study: Task 0 (Survey)” on the computer. A popup window  
should appear. Please make sure you expand the window so it takes up your entire screen.

12

13

     Did everyone find how to make the window take up the entire screen?

14

15

     You can now fill out the questions. When you are finished please just wait until the  
whole group is ready.

## Task 1

### Overview:

1.1. No IAP - Jeweled Bricks

1.2. IAP – Jump Racer

1.2.7 PLEASE NOTE (read more)

1.2.8 Key Details + Popup (scroll down)

### Order A:

1.1; 1.2; 1.2.7; 1.2.8

*Note that because of randomization of the experimental conditions, this order above only shows only one order in which the tasks were performed.*

### Instructions:

1. Now that everyone has had a chance to finish the survey. Please close the popup window. And your screen should look similar to mine.
2. *(navigate to Kindle Study: Task 1) use PPT*
3. Remember to expand the popup window so it takes up your entire screen. And your computer should now look like mine.
4. (stop sign) > proceed
5. Select Task 1.1
6. (stop sign)
7. Now if you could focus your attention on the Kindle Fire in front of you. Please pick it up and we are going to navigate through it together.

- 1 8. For this task, we are going to navigate to the App store and look at the description
- 2 pages for some apps. Imagine you are going to the App store to look for an app for
- 3 your child or grandchild.
- 4 9. Steps to get to “Jeweled Bricks”
- 5 10. Do not play or download the game.
- 6 11. Now does everyone’s Kindle Fire show this screen? If it does not, please raise your
- 7 hand.
- 8 12. For this task, you have now navigated to the app store and selected the app “Jeweled
- 9 Bricks.” When you click next on the computer you will be asked a series of questions
- 10 regarding the app description page you see on your Kindle Fire. You will notice on
- 11 the computer a small version of the Kindle Fire screen has been provided. Please do
- 12 not answer the questions by trying to read the screenshot on the computer, but please
- 13 focus on the Kindle Fire. The screenshot is merely provided for you so that you can
- 14 verify you are looking at the correct content.
- 15 13. Remember, this is not a race. Please answer thoughtfully. The people next to you
- 16 may or may not have the same questions as you, so don’t worry about their progress.
- 17 14. Now go ahead you can begin and answer the questions through this task and stop
- 18 when you get back to the navigation page, which I will display on the screen in a few
- 19 minutes.
- 20 15. Alright we are now going to select Task 1.2
- 21 16. (stop sign)
- 22 17. Navigate to “Jump Racer”
- 23
- 24
- 25
- 26
- 27

- 1 18. Similar to before, you have now navigated to the app description page in the app  
2 store for the app “Jump Racer”. Please answer the following questions regarding the  
3 content you see on your Kindle Fire. Again, do not try to read the small screenshots  
4 provided on the computer.
- 5 19. Stop when you get to the next stopping point.
- 6 20. (stop sign)
- 7 21. We are now going to select Task 1.2.7
- 8 22. (stop sign)
- 9 23. If you haven’t already done so on your Kindle Fire, please tap the Read More link on  
10 the left of the page. I’m directing your attention to the bottom of the text starting with  
11 the capital letters PLEASE NOTE
- 12 24. Raise your hand if you do not see this.
- 13 25. Click next on your computer and answer the following question or questions.
- 14 26. We are now going to do Task 1.2.8
- 15 27. (stop sign)
- 16 28. For this task, please focus your attention on the Kindle Fire again.
- 17 29. Please direct your attention to the “Key Details” section on the screen, which should  
18 be on the right side.
- 19 30. Is there anyone that does not see “Key details” on their screen?
- 20 31. Okay, please proceed through the following questions relating to this Key Details  
21 section.
- 22 32. (stop sign)
- 23 33. Please press on “Key Details” on the right side of the screen.
- 24  
25  
26  
27

1 34. This popup window should appear. Does everyone see it?

2 35. Please use your finger to scroll down. And you will see the section In-App

3 Purchasing.

4 36. Please proceed through the questions on the computer, referencing this screen you  
5 see on your Kindle Fire.  
6

## 7 8 9 **Task 2**

### 10 Overview:

11  
12 2.1 May 2013 Screenshot

13  
14 2.2 June 2014 Screenshot

### 15 Order A:

16  
17 2.1; 2.2

### 18 Instructions:

- 19
- 20 1. Go through PowerPoint to navigate to survey
- 21 2. (stop sign after selecting Task 2.1)
- 22 3. Please hand your Kindle Fire to me and I am going to load an image.
- 23 4. Please do not turn over your Fire tablet yet.
- 24 5. For this task, you have a Fire tablet, which has been placed face down in front of you
- 25 and an account password, which is simply the word "password." Imagine that you
- 26 have given your Fire tablet to your child or grandchild, who has been playing a game
- 27

1 app on the tablet. Your child hands you the tablet. When I instruct you to do so, click  
2 'Next' on the computer screen, turn your Fire tablet over and read the information  
3 displayed on the screen. When you are done reading the information on the screen,  
4 enter your password on the computer and click Submit. This is neither a race nor a  
5 memory test. Please read the information on the screen at the pace you would if your  
6 child or grandchild had just handed you the device.  
7

8 6. (*charades, slow*) Just to repeat, When I instruct you to do so, click 'NEXT on the  
9 computer screen, turn your Fire tablet over and read the information displayed on the  
10 screen. When you are done reading the information on the screen, enter the word  
11 'password' on the computer and click 'Submit.' Whenever you are ready, you may  
12 click 'Next' and proceed."  
13

14 7. (*stop sign*)

15 8. You may now resume looking at the tablet displaying the same page you just saw.  
16 Click 'Next' on your computer and answer the following questions about that page.  
17 Remember it is not a race. Your screens may or may not be the same as the person  
18 next to you, so don't base your progress off others.

19 9. PowerPoint to show select 2.2

20 10. Please hand Kindle Fire back to me.

21 11. Do not turn over the tablet yet.

22 12. Repeat Step 4 and 5.  
23  
24  
25  
26  
27

## Task 3

### Overview:

- 3.1 Email Notification (split screen)
- 3.2 Refund Plan (split screen)
- 3.3 Contact Amazon (minimize survey)

### Instructions:

1. For this task, I am going to set up your computer for you. (dual screen email and survey)
2. You are now looking at two windows. One is the survey. The other is an email. Note that the email can be scrolled down to view more content.
3. For this task, imagine that your child or grandchild has been playing with your Fire tablet. At some point, you check your email and see that you have received the email that is displayed on the left of your computer screen. Whenever you are ready, click Next on the right side of your computer and answer the following questions about the email. Remember, this is neither a memory test nor a race.
4. Imagine that the product identified in the email was never purchased or was accidentally purchased by you, your child, or your grandchild and that you would like to seek a refund from Amazon for the charge. Click Next on the right side of your computer and answer the questions about contacting Amazon.
5. For this task, we are going to actually try to contact Amazon just as you would in real life. When I instruct you to do so, please try to contact Amazon to seek a refund for

1 the product identified in the email that you believe was never purchased or was  
2 accidentally purchased by you, your child, or your grandchild. The tools you have  
3 available to contact Amazon include the computer in front of you, which has access  
4 to the Internet.

5 If you would like to use the Internet, you may click on the Internet Explorer icon  
6 or the Google Chrome Icon located at the bottom of the computer. You also have  
7 your Fire tablet, which has access to the Internet using the Silk Browser. You also  
8 have a telephone by which you may call Amazon. And you have the confirmation  
9 email identifying the product for which you seek a refund. If you need them, your  
10 account email address and password will be provided on the following slide.

11  
12 6. Remember, this is neither a memory test nor a race. Imagine that you have actually  
13 received this email and want to seek a refund from Amazon for the product identified  
14 in the email. How will you do so? Whenever you are ready, please begin.

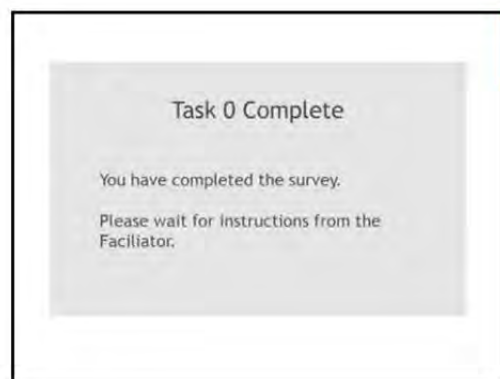

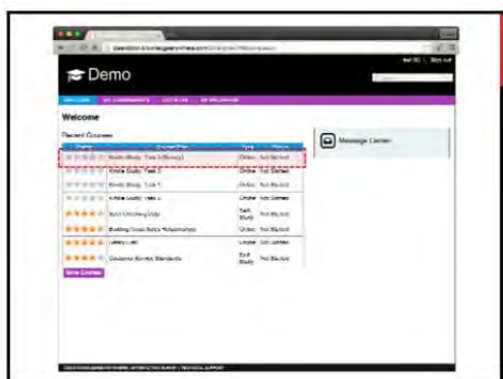

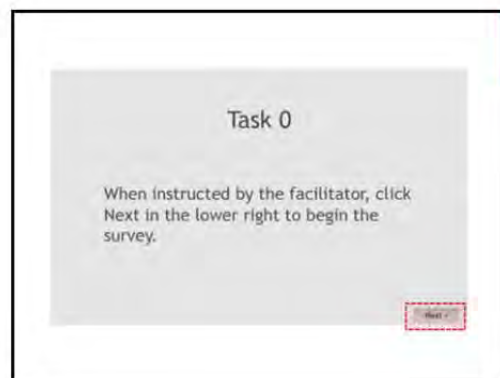

15  
16 7. *(Stop people when they are finished)*

## 17 18 **Debrief**

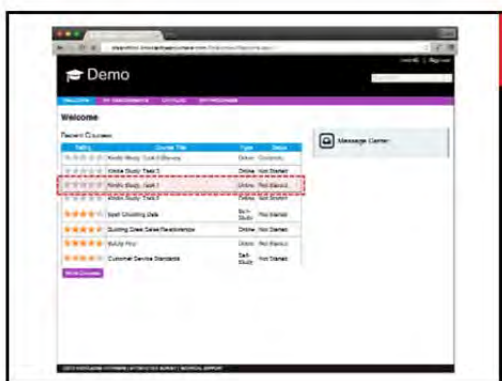

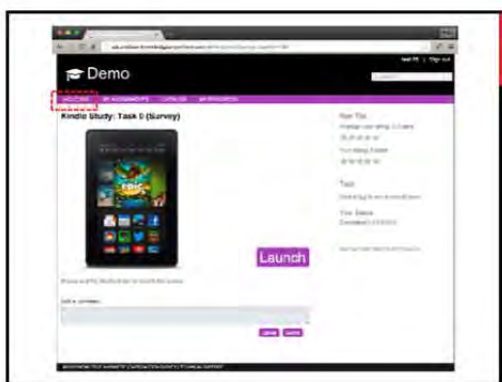

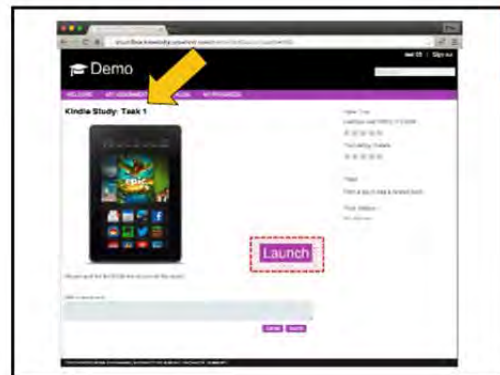

19 We are now finished with the study. Just for your interest, the purpose of this study  
20 was to evaluate the Amazon interfaces specifically regarding in-app purchases.

21  
22 I am now going to give each of you \$150 and then you will be free to go. Thank you  
23 again very much for your time and effort.  
24  
25

Question 21 of 21

Submit

 A screenshot of a survey question. The question is: "What, if anything, do you think you can do if you want to prevent being charged money for actions taken while your child/grandchild uses the app?". Below the question is a text input field with a "255-character limit" label. To the right of the input field is a small image of a smartphone screen displaying a "Confirm App Purchase" dialog. Below the input field is a "Review Area" label. At the bottom left is "Question 21 of 21" and at the bottom right is a "Submit" button.

## Slide29

Task 2.2 Complete

You have completed Task 2.2.

Click Main Navigation Menu and wait for instructions from the Faciliator.

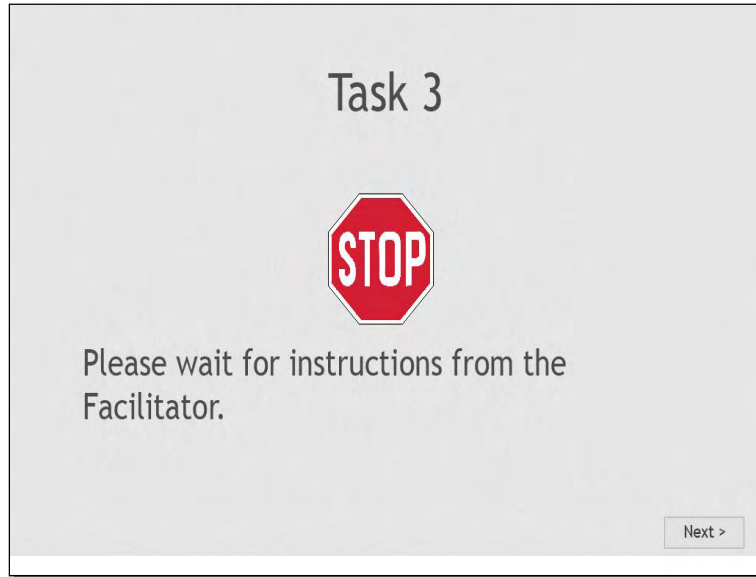

< Main Navigation Menu

 A screenshot of a task completion message. The text reads: "Task 2.2 Complete", "You have completed Task 2.2.", and "Click Main Navigation Menu and wait for instructions from the Faciliator." At the bottom right is a button labeled "< Main Navigation Menu".

# Appendix H: Curriculum Vitae

## Craig S. Rosenberg, Ph.D.

An accomplished human factors engineer, user interface designer, and systems and software engineer specializing in analysis and design of mobile computing devices, complex systems, user centered design, information architecture, user experience, systems and software engineering, object oriented analysis, and modeling and simulation. Extensive experience in the entire software design and development life cycle applied to a wide range of domains from embedded mobile devices though enterprise class mission critical applications.

## SUMMARY OF QUALIFICATIONS

- Human Factors, User Interface Design, Information Architecture, Cognitive Engineering, Experimental Design
- Systems Engineering, Software Architecture, Modeling and Simulation, Virtual Environments, Animation, Art
- C++, C, C#, JAVA, UML, .NET, VISUAL BASIC, HTML, XML, LISP, FORTRAN, SAS
- Visual Studio, Eclipse, Rhapsody, RSA/RSM, ClearCase, ClearQuest, Dreamweaver, Photoshop, Illustrator
- 3D Studio, Alias, AutoCAD, Rogue Wave, GD Pro, Motif, Builder Accessory, JSPWiki, Spark, MS Office
- Windows, Linux, OSX, PC, Macintosh, Sun, HP, IBM, StereoGraphics

- Scholarship from the Interservice/Industry Training Simulation & Education Conference
- Moderator of the Seattle Android Users Group and founder of the Northwest Alias Users Group

## **EDUCATION**

- Ph.D. Human Factors, University of Washington, 1994
- M.S. Human Factors, University of Washington, 1990
- B.S. Industrial Engineering, University of Washington, 1988
- Graduate GPA: **3.83**

## **PROFESSIONAL EXPERIENCE**

### **Global Technica, Seattle, WA**

**Nov 1996 - Present**

Senior human factors engineer, user interface designer, and software architect for a wide range of advanced commercial and military programs.

- Senior modeling and simulation engineer developing advanced discrete event and agent based software tools, models, and simulations in the areas of missile defense, homeland security, battle command management, networking and communications, mobile computing, air traffic control, software simulation, and UAV command and control.
- Lead system architect developing advanced air traffic control analysis applications, toolsets, and trade study simulations for Boeing Air Traffic Management. Technical lead responsible for tasking of twelve engineers.

- 1 • Architect of the Boeing Human Agent Model; an advanced model for the  
2 simulation of human sensory, cognitive, and motor performance as applied to the  
3 roles of air traffic controllers, pilots, and UAV operators.
- 4 • Lead human factors engineer and user interface designer for Boeing's main  
5 internal vector and raster computer aided drafting and editing system that  
6 produces all maintenance manuals, shop floor illustrations, and service bulletins  
7 for all Boeing commercial aircraft.
- 8 • Systems Engineer for the Future Combat Systems Network Systems and Software  
9 Engineering group.
- 10 • Senior Software Developer for Level 11 and Disney, working on software for  
11 tracking of visitors to Disney World

12 Additional responsibilities include system engineering, requirements analysis, functional  
13 specification, use case development, user stories, application prototyping, modeling and  
14 simulation, object oriented software architecture, graphical user interface analysis and  
15 design, as well as UML, C++, C#, and Java software development.  
16

## 17 **WhereWuz, Seattle, WA**

**March 2010 - Present**

18 Founder, inventor, user interface designer, and software architect for a company  
19 producing advanced mobile software running on GPS enabled smartphones. WhereWuz  
20 allows users to record exactly where they have been and query this data in unique ways  
21 for subsequent retrieval based on time or location. Currently available for iPhones and  
22 Android handheld devices.  
23  
24

**Entrepreneur in Residence,  
Spyglass Ventures, Los Angeles, CA**

**April 2008 – Dec 2009**

Lead technologist and entrepreneur in residence for a Los Angeles based media oriented venture capital firm focusing on early stage private equity investing. Responsibilities include evaluating investment opportunities, generating new business ideas, and providing functional expertise to assist existing investments in the mobile and entertainment sectors.

**User Interface Designer,  
ObjectSpeed, Seattle WA**

**Feb 2006 – June 2007**

Lead user interface and interaction designer for a technology company specializing in consumer hand held VoIP products. Responsible for all user interface design, user interaction, information architecture design, industrial design and human factors activities. Additional responsibilities include functional specification, human factors analysis, requirements analysis, application prototyping, graphical design, and user interface programming for a hand held VoIP mobile consumer device.

**User Interface Designer,  
Ahaza Systems, Seattle, WA**

**June 2001 - Dec 2001**

Lead user interface and interaction designer responsible for all user interface design and development activities associated with a complete line of advanced IPv6 network hardware devices. Duties include user interface design, human factors analysis, and interactive application prototyping.

**User Interface Designer,  
Eyematic Interfaces, Seattle, WA**

**Oct 99 - April 2001**

Lead human factors and interaction designer responsible for all user interface design and development activities associated with real-time mobile hand held 3D facial tracking, animation, avatar creation and editing software. Duties include requirements analysis, functional specification, user interface design, and human factors analysis.

**User Interface Designer,  
AT&T Wireless/ Teague Corporation, Redmond, WA**

**June 95 - March 96**

Lead human factors and interaction designer for a large industrial design firm. Responsible for all functionality, human factors analysis, user interface design, graphical design, systems analysis, and documentation for the first two-way wireless pager produced by AT&T Wireless.

**Associate Assistant Professor  
University of Washington, Seattle, WA**

**Dec 94 - Dec 95**

Human Factors Professor at the University of Washington Industrial Engineering Department. Duties include teaching, writing research proposals, designing and conducting funded human factors experiments for the National Science Foundation, as well as hiring and supervising students.

**Software Design Engineer  
Socha Computing, Bellevue, WA**

**Aug 94 - Sept 95**

Responsible for designing and developing interactive multimedia games as well as educational software for children and adults. Duties include functional specification,

1 software design and architecture, user interface design, application prototyping, software  
2 development, focus group testing, and internet research.

3  
4 **Network Engineer, March 92 - Nov 96**  
5 **PSF Industries, Seattle, WA**

6 Independent consultant to a mechanical engineering firm specializing in the design,  
7 fabrication, and installation of large scale, high pressure vessels. Responsible for  
8 designing, procuring, and installing a state of the art networked computer aided  
9 engineering system to greatly improve design quality and engineer productivity.

10  
11 **Human Factors Researcher Jan 89 - June 94**  
12 **University of Washington, Seattle, WA**

13 Responsible for designing and performing advanced human factors experiments relating  
14 to virtual worlds and advanced visualization research. Funded by the National Science  
15 Foundation to conduct research on advanced software and hardware interfaces for virtual  
16 environments. Duties include user interface design, systems design, software  
17 development, graphics programming, experimental design, as well as hardware and  
18 software interfacing.

19  
20  
21 **Alias Animator, April 91 - Jan 92**  
22 **Technology Design, Bellevue, WA**

23 Independent contractor to an industrial design firm specializing in high technology  
24 hardware design for computers and consumer electronics products. Created models,  
25 animations, and renderings that were used for product engineering and marketing.  
26 Services also included training, hardware and software installation, and system  
27 optimization.

**Operations Manager,  
Micro Products, Bellevue, WA**

**June 88 - Sept 88**

Managed large scale computer graphics conversion contracts. Installed and optimized a custom optical scanning and capture system for a computer graphics scanning company. Responsibilities also included employee management, production scheduling, subcontracting and outsourcing, and software development.

**Industrial Engineering Consultant,  
Avtech Corporation, Seattle, WA**

**Jan 88 - June 88**

Professional industrial engineer for a large aerospace digital electronics company. Solely responsible for completely redesigning the entire manufacturing facility to optimize the assembly of multiple lines of digital avionics communication equipment. Additional responsibilities included integrating software for a CNC milling center to completely automate the production of lighted instrument displays panels.

**ADDITIONAL INFORMATION**

I have published twenty-two research papers in professional journals and proceedings relating to user interface design, computer graphics, and the design of spatial, stereographic, and auditory displays. I was the sole recipient of a \$10,000 scholarship award from the I/ITSEC for advancing the field of interactive computer graphics for flight simulation. I received an award from the Link Foundation for my work furthering the field of virtual interface design. I created five book covers for books by Harcourt Brace Publishing that feature the authors Arthur C. Clarke, Isaac Asimov, and Stephen King. Several minutes of my computer graphics animations appear in the movie Beyond

1 the Mind's Eye produced by MIRAMAR. I have won two engineering design awards  
2 from the City of Los Angeles for the design of an energy saving product. In my free time  
3 I enjoy creating computer graphic images and animations as well as composing and  
4 recording music. My company's website can be found at: [www.globaltechnica.com](http://www.globaltechnica.com)

## Appendix J: Study Data

This document contains all raw data from the Amazon Kindle Fire Tablet Usability Study conducted November 27th - 28th, 2015.

- Data were generated by an Adobe Captivate 9 course and captured in Knowledge Anywhere's Quest Track learning management system.
- Test subject data was removed from this data set, so the set contains only the data used in the experimental analysis.
- Data conforms to the [SCORM 1.2](#) standard.
- The data are organized into these columns:
  - **Identifier:** Unique row identifier generated by SCORM
  - **First:** Subject's first name. All subjects were assigned a first name of "Subject"
  - **Last:** Subject's last name. All subjects were assigned a sequentially numbered last name. Subject 01 was a test subject and Subjects 23, 24, and 26 did not show up for the test, so those subject numbers were not used.
  - **Course Name:** Corresponds to the survey task.
  - **datatype:** Each instance of a subject responding to a survey question generated multiple rows of data. This column identifies the data in each row:
    - **cmi.interactions.0.id:** The question numerical identifier and text of the question. The numerical identifier (e.g., 29006) is generated by SCORM. The question text begins with a number (e.g., 0.q1) assigned to the question by the research team.
    - **cmi.interactions.0.type:** Type of question. "Choice" corresponds to multiple choice. "Fill-in" corresponds to short answer.
    - **cmi.interactions.0.student\_response:** Answer provided by survey subject
    - **cmi.interactions.0.result:** Whether the answer was correct or incorrect. This row should be ignored, particularly for fill-in questions, as it does NOT necessarily match whether the answer was coded as correct or incorrect by the research team during data analysis.
    - **cmi.interactions.0.latency:** Time taken to respond to the survey question
    - **cmi.interactions.0.objectives.0.id:** Mapping to a learning objective. This row is not relevant to the study.
    - **cmi.interactions.0.time:** Time of day when question was answered
  - **data:** Data collected

Identifier	First	Last	CourseName	datatype	data
7728	subject	2	Kindle Study: Task 0 (Survey)	cmi.interactions.0.id	29006 0.q1 What is your gender
